#### 1. Introduction

The MTN/VM220D Vibration Meter is a rechargeable, portable instrument designed to operate with a constant current type accelerometer to provide accurate vibration measurements.

Conforming to ISO10816-3/7, MTN/VM220D will display RMS, peak, peak-peak, crest factor and bearing condition on its colour screen. Up to 100 time-stamped readings can be stored to non-volatile memory.

The MTN/VM220D is an invaluable trouble-shooting tool for instrumentation engineers familiar with the problems of plant vibration monitoring, providing an instant readout of the condition of bearings and rotating parts.

#### 2. Precautions

- Only use the unit as directed in this manual.
- Protect the unit from shocks and extremes of temperature, humidity and harsh environments (such as high salt).
- Use only a soft clean cloth. Do not use solvents or harsh cleaning agents.
- The unit contains no user serviceable parts. Do not attempt to disassemble or repair the unit, as this will invalidate your warranty.
- To ensure continued performance, have the unit checked and serviced at regular intervals.

#### 3. Equipment Details

Purchase date:	
Vibration meter serial number:	
vibration meter scharnamber.	
Cable serial number:	
Sensor serial number:	
Sensor senarransen	
C - ft.	
Software version:	

## 4. Preparation for use

Carefully remove the instrument from the transit packaging and ensure all accessories supplied agree with the delivery note.

Visually inspect for transit damage.

	<ul><li>Next calculation mode</li><li>Next memory slot</li></ul>
OK	<ul><li>Store value to memory slot</li><li>Select parameter</li></ul>

6. Display

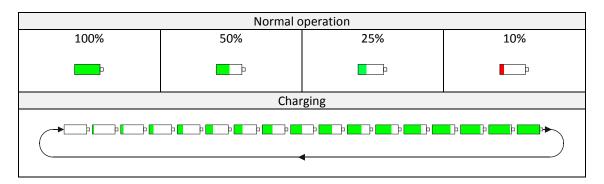

The headphone jack will accept a 3.5mm stereo jack plug. Headphones (not included) may be used to listen to the vibration directly.

To avoid hearing damage, use of headphones with an inline volume adjustment is recommended. Ensure the volume is turned down before connecting your headphones. After placing headphones in your ears, gradually turn up the volume until you reach a comfortable listening level. Do not use headphones when it's unsafe to do so - while operating a vehicle, or during any activity or in an environment where your full attention to your surroundings is required.

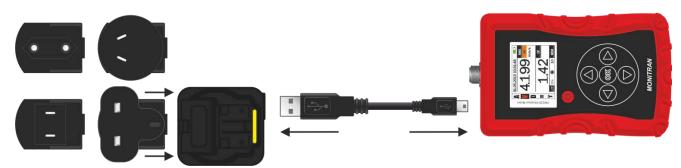

#### 8. Battery status

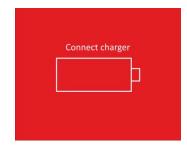

The meter will automatically turn-off after 15 minutes of inactivity (5 minutes if sensor not connected).

#### 9. Charging the unit

The supplied multi-voltage charger comes with 4 adaptors and is suitable for use worldwide. Connect the correct adaptor for your region, plug into mains and connect the mini USB to the MTN/VM220D.

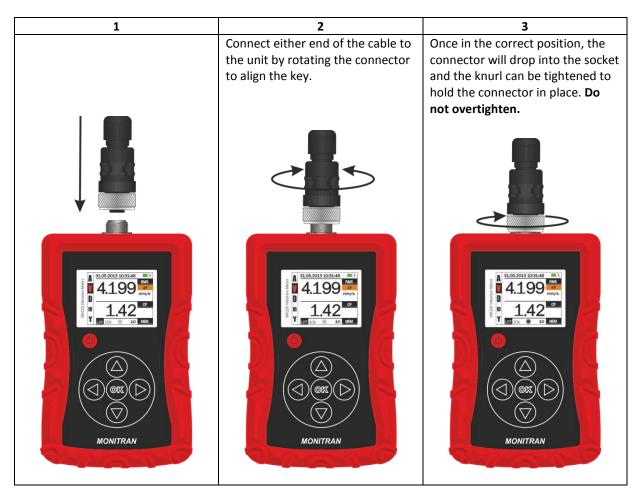

The unit should reach full charge within 4 hours. The battery status icon will indicate charging is in progress (see 6. *Display & 8. Battery status*).

When the battery is level is low, a warning screen (see left) will display for 5 seconds and the unit will power off.

#### 10. Connecting sensor

- The sensor and cable can be connected/disconnected at any time.
- Once fully charged, briefly press the power button <sup>(9)</sup> to switch the unit on.

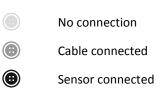

• Repeat this process to connect the sensor to the other end of the cable.

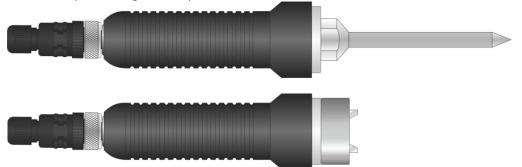

#### Notes:

The connection status icon (see 6. Display) will change accordingly.

• Attach spike or magnet, if required.

Press buttons O to switch between measurement modes. The current mode will be highlighted.

Units for each measurement mode can be set (see 16. Setting units)

		MODE	UN	ITS
	A	Acceleration mode	g	m/s²
	V	Velocity mode	mm/s	in/s
	D	Displacement mode	μm	mils
į	m	Memory recall mode (see 13. Memory recall mode)		
•	ť	Settings (see 14. Settings menu)		

#### 12. Calculation modes

When the unit is in one of the measurement modes (acceleration, velocity, displacement), press buttons to switch between RMS, peak-peak and 0-peak displays. An additional bearing display is available in both acceleration and velocity measurement modes. The bearing mode passes the vibration signal through a 1kHz-10kHz band-pass filter to attenuate non-bearing vibration found at lower frequencies, and is used for more precise monitoring of bearings.

Display	Calculation mode
RMS	Root mean square
PK-PK	Peak to peak
0-PK	Zero to peak
В	Bearing (RMS)

Press To store the displayed value in the current memory slot. The current memory number will automatically move to the next slot.

- Current time
- Current date
- Measurement mode
- Calculation mode
- Crest factor value
- Vibration value & units

$$X_{rms} = \sqrt{\frac{\left(X_{1}^{2} + X_{2}^{2} + \dots + X_{n}^{2}\right)}{n}} \qquad \text{Crest Factor} = \frac{X_{0-pk}}{X_{rms}}$$
where: 
$$X_{rms} = RMS \text{ value}$$

$$X_{rms} = sample$$

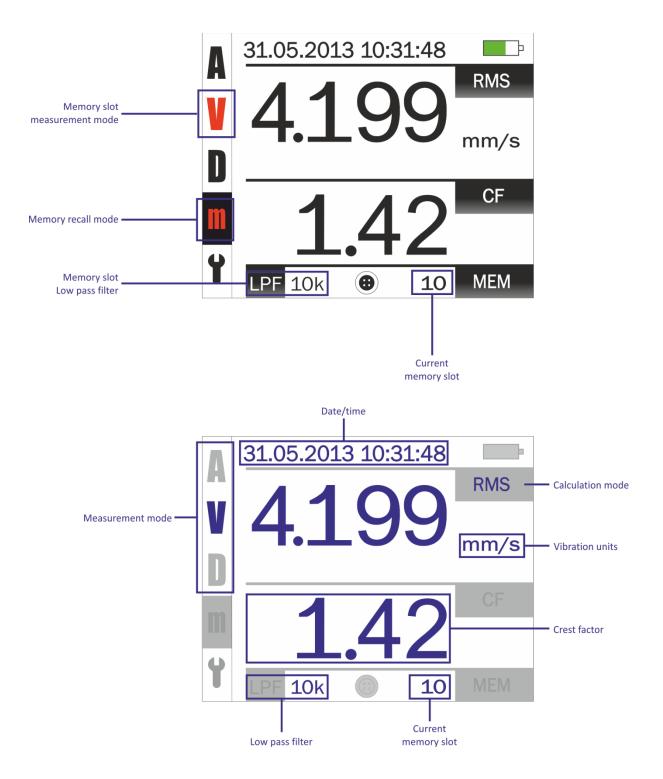

$$n = number \text{ of samples}$$

The Crest Factor is equal to the peak amplitude of a waveform divided by the RMS value. The purpose of the crest factor calculation is to give an analyst a quick idea of how much impacting is occurring in a waveform. Impacting is often associated with roller bearing wear, cavitation and gear tooth wear.

Using buttons O, select memory recall mode. Press buttons O to navigate through memory slots.

When returning to the measurement mode, the selected memory slot will be the current memory slot for the next store.

It is possible to quickly clear all memory slots (see 18. Clearing memories).

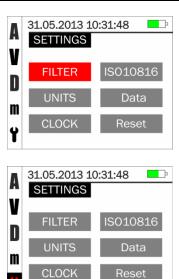

There are 100 memory slots in total. The blue fields shown in the above figure are saved into memory

Provided the unit is returned to Monitran for service, the memories will remain intact, even after battery replacement and calibration (see 24. After Sales Support)

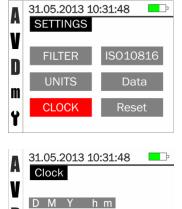

#### 14. Settings menu

- Using buttons , select **1**.
- Press button 🕑 to enter settings menu.
- Use buttons ▲▼▲◆ to navigate and press <sup>™</sup> to select option.
- Use button 🕙 to navigate back to the main menu.

#### 15. Setting the clock

- Enter settings menu (see 14. Settings menu)
- Press button 👽 twice to highlight CLOCK and press 🊥 to enter clock mode.
- Use buttons ▲ to set DAY/MONTH/YEAR/HOUR/MINUTE settings.
- Press buttons I to change between DAY/MONTH/YEAR/HOUR/MINUTE.
- Press 🕮 at any time to save and return to settings menu.

SETTINGS

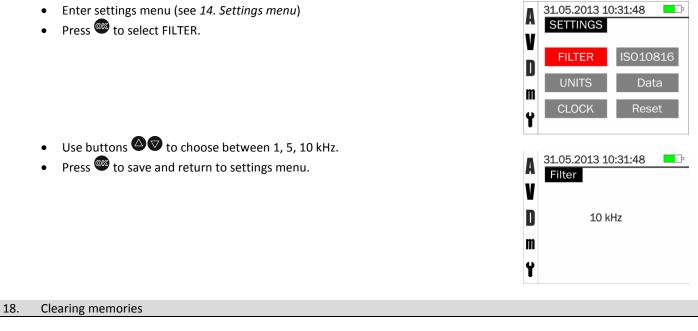

þ

Use buttons I to choose between acceleration (A), velocity (V), displacement (D).

- Use buttons <sup>▲</sup> to select units.
- Press <sup>III</sup> to save and return to settings menu.

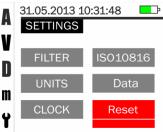

#### 17. Setting low pass filter

- Enter settings menu (see 14. Settings menu)
- Press <sup>(C)</sup> to select RESET.
- A red bar will appear under the button to indicate progress.

NOTE: The clock and unit settings will be unaffected.

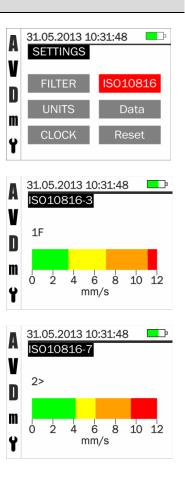

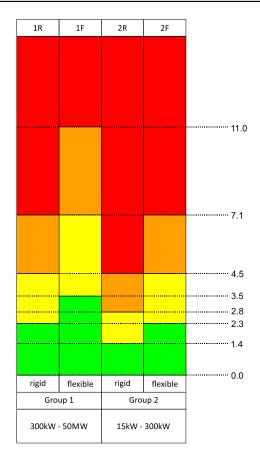

#### 19. Setting ISO10816 group

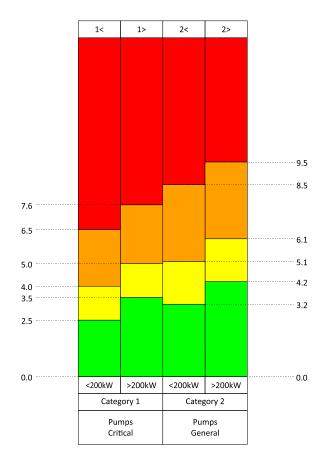

- Enter settings menu (see 14. Settings menu)
- Press <sup>(C)</sup> to select ISO10816 (see *20. ISO10816*).
- Use buttons △ ♥ to select group (1F, 1R, 2F, 2R, 1<, 1>, 2<, 2>).
- Press <sup>III</sup> to save and return to settings menu.

Sufficient severity to cause damage to the machine
Restricted operation until remedial action can be taken
Unrestricted long-term operation
Newly commissioned machines

Please consult ISO10816 standards for more information.

# Data transfer

- 1. Connect to meter to computer
- 2. Ensure data reader software is running on computer.

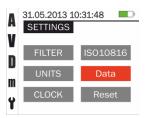

3. Select meter to transfer data from. If only 1 meter is connected, it will automatically be selected.

# 4. On meter, navigate to SETTINGS menu.

5. Navigate to DATA option and press OK.

6. After 2-3 seconds, status window will display 'Downloading...'

#### Data management

### To export all data:

Click Export Data (all) to export as .csv file (comma-separated values) CSV files can be opened and edited in MS Excel.

#### 25. After Sales Support

## <u>Warranty</u>

All products are guaranteed against defects in materials and workmanship for a period of 24 months from the date of purchase. In the event of failure within 24 months of the original purchase the Company will promptly repair or replace any defective products without charge.

This warranty is void if repair has been attempted by unauthorised persons or agents, if the products have been used for purposes for which they were not intended, if they have been subjected to abuse or wilful neglect or if the user has in any way failed to take sufficient precautions to safeguard the products.

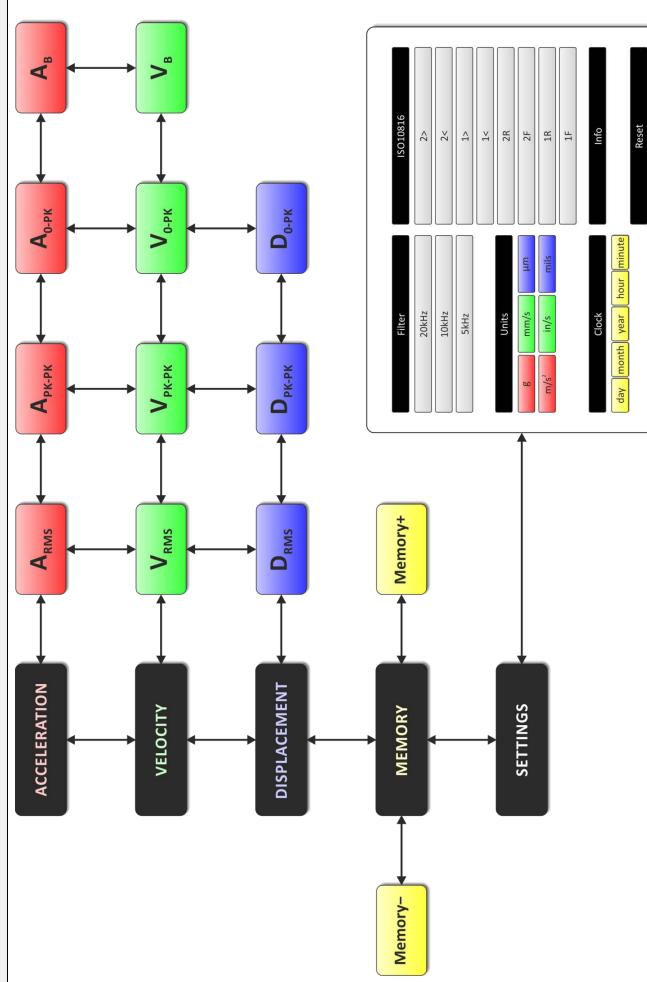

No liability will be accepted for loss of items or component parts.

# **Recalibration**

It is recommended that the Vibration Meter is recalibrated annually to maintain optimum performance.

Monitran are pleased to provide this service. Please contact our Sales Office for details.
